

O&M Services

**Customer:** Blommer Chocolate

**Location:** Chicago, IL

**Scope of Work:** Armstrong International is responsible for the operation and maintenance of the boilerhouse assets. These assets include two 650 hp boilers capable of 45,000 pph steam capacity. These assets also include the auxiliary components of producing the steam generation system.

Armstrong employs and manages four on-site licensed stationary engineers, overseeing boilerhouse operations.

Armstrong is responsible for identifying future utility improvement opportunities, such as electrical, steam, compressed air, chilled water, and wastewaters, and recommending cost saving solutions.

**Terms:** Three-year term began September 2002.

**Benefits:** Blommer Chocolate now has on-site utility expertise that is motivated to continually reduce utility operating costs. They have access to extensive engineering resources and support with environmental reporting.
