

O&M Services

Customer: Riviana Foods

Location: Memphis, TN

Scope of Work: Armstrong Service is responsible for operation and routine maintenance of the utilities systems at this rice manufacturing and packaging facility. These responsibilities include the steam, compressed air and waste water treatment systems. The utility assets include the following:

- (3) 1200 HP boilers
- 250 HP / 1250 CFM / 125 PSI air compressors
- (1) Waste water treatment plant
- Associated ancillary steam, condensate, compressed air and water system equipment and piping

Armstrong Service will employ full-time on-site management to execute these utility responsibilities.

The agreement also requires Armstrong Service to identify future utility improvement opportunities and recommend cost saving solutions.

Terms: 2 Year term beginning in May 2010

Benefits: Riviana Foods now has on-site utility expertise motivated to continually reduce cost and focus on utility system reliability. They also have access to all of Armstrong's extensive utility/energy engineering resources.
